ON THE SPOT HEATING & AIR

Authorization to Use Company Name and Branding in Student Maker Project

October 31, 2026

To: MIT Admissions / Maker Portfolio Review Team and other educational project reviewers

Re: Noah Zettler — HVAC Remote Monitoring Student Project

I, Josh Zettler, writing on behalf of On The Spot Heating & Air, authorize Noah Zettler to use the On The Spot Heating & Air name and related company branding in connection with his HVAC remote-monitoring student project, including its software interface, demonstration dashboard, project screenshots, code repository documentation, video demonstrations, and materials submitted as part of his MIT Maker Portfolio and other college applications.

This permission includes showing the company name and branding on a prototype website or dashboard and sharing reasonable copies of the above project materials with admissions reviewers, mentors, and educational evaluators for the purpose of demonstrating and explaining Noah's work.

The project is an independently developed student prototype. Company-name authorization does not mean that On The Spot Heating & Air has certified, validated, commercially deployed, or endorsed the prototype's performance, safety, diagnostic accuracy, or readiness for customer use. Any sample company, equipment, site, or account names appearing in the interface are demonstration context unless specifically identified as real.

This authorization does not transfer ownership of On The Spot Heating & Air trademarks or branding, does not assign ownership of Noah's project or code to the company, and does not grant permission to disclose confidential customer information, private account data, passwords, or proprietary company records. Any photographs, videos, or screenshots submitted should avoid identifying customers or private operational data without separate permission.

This letter confirms permission to use the On The Spot Heating & Air name and branding for the educational purposes stated above. Any future commercial licensing, sale, or customer deployment would require a separate agreement and any appropriate technical and safety review.

Sincerely,

Josh Zettler
Authorized Representative, On The Spot Heating & Air
